

Cade Duncan

cadeduncan72@gmail.com | linkedin | github | cadeduncan.com

Skills

Languages: C#, SQL, JavaScript, TypeScript, Python

Frameworks & Libraries: ASP.NET Core, React, Next.js, DataTables, Entity Framework, REST API

Tools & Platforms: SSMS, Supabase, Vercel, GitHub

Agent Workflow: Claude Code, Codex, MCP

Testing & Quality: Vitest, React Testing Library

Experience

Software Engineer, Russell Sigler Inc. – Remote Jan 2025 – Present

- Built a full-stack order-intake platform with over 15,000 orders, integrating automated email workflows and consuming 50% of all page visits.
- Engineered a self-service reporting system with automated dynamic delivery, custom data, health monitoring, and personalized scheduling across 70+ reports.
- Co-authored a shared DataTables component library adopted across 70+ pages spanning 9 departments, providing multi-format export, inline cell editing, and persisted per-user layout preferences.
- Implemented GitHub Actions CI/CD, automating IIS deployment and release tracking.
- Engineered a documentation system containing PRDs, technical writeups, and tasks, cutting the tokens AI needs to accurately reason about existing systems.

Software Engineer Intern, Russell Sigler Inc. – Remote Feb 2024 – Dec 2024

- Integrated a shared email service across two internal products, sending an average of 5,000 emails per month.
- Built a page-level, database-driven role-based access control (RBAC) system across all public-facing applications, replacing unrestricted modification patterns.
- Designed a self-service permission management interface enabling managers to provision team access without developer involvement.

Projects

Windows 7 Web OS

- Built a React component library on 7.css, powering a full desktop shell with a custom window manager, start menu, task bar, and era-themed Internet Explorer.
- Architected a registry-driven config system that lets users personalize their own desktop.
- Authored an AI operating manual so any session resumes accurately without re-reading the project's full history.

Stardew Valley Mods

- Published to Nexus Mods, surpassing 100,000 downloads across multiple releases.
- Implemented event-driven SMAPI hooks managing real-time menu state across game contexts, with defensive logic preventing a game-breaking soft-lock.

Super Mario Bros. NES In Godot

- Developed as a 1:1 recreation of the original with accurate physics, collision detection, and game-state systems.

Education

California State University, Fullerton – BS in Computer Science

Aug 2023 – Dec 2024

Relevant Coursework: Artificial Intelligence, Machine Learning, Data Science & Big Data, Algorithm

Engineering, Software Engineering, File Structures & Databases
